

Notes/Guided Practice: 5.5 Multiple-Angle and Product-to-Sum Formulas**Double Angle Formulas**

Example #1 Use the Sum & Difference Formulas to verify the Double Angle Formulas.

a. Verify: $\sin(2\theta) = 2\sin\theta\cos\theta$

b. Verify: $\cos(2\theta) = \cos^2\theta - \sin^2\theta$

c. Verify: $\tan(2\theta) = \frac{2\tan\theta}{1 - \tan^2\theta}$

Example #2 Find the exact value of $\frac{2\tan 15^\circ}{1 - \tan^2 15^\circ}$.

Example #3 Find the exact values of $\sin 2u$, $\cos 2u$, $\tan 2u$, if $\sin u = \frac{3}{5}$,
and $0 < u < \frac{\pi}{2}$

Example #4 Verify: $\cos 3x = 4\cos^3 x - 3\cos x$

Example #5 Find the exact value of $\cos^2 15^\circ - \sin^2 15^\circ$.

Example #6 If $\sin \theta = \frac{4}{5}$ and θ lies in quadrant II, find the exact value of each of the following: $\sin 2\theta$, $\cos 2\theta$, $\tan 2\theta$.

Example #7 **Solve $2\cos x + \sin 2x = 0$.**

Power-Reducing/Half Angle Formulas

Example #8 Use the half-angle formulas to find the exact values of sine, cosine, and tangent of $\frac{7\pi}{12}$.

Example #9

Find $\sin\left(\frac{u}{2}\right)$, $\cos\left(\frac{u}{2}\right)$, and $\tan\left(\frac{u}{2}\right)$, given that $\csc u = -\frac{5}{3}$
and $\pi < u < \frac{3\pi}{2}$

Example #10

Verify: $\tan\frac{x}{2} = \csc x - \cot x$

Example #11

Use the half-angle formulas to simplify the expression:

$$\sqrt{\frac{1 + \cos 4x}{2}}$$

Example #12 **Use the half-angle formulas to find the exact values of sine, cosine, and tangent of 112.5° .**

Example #13

Verify: $\sin^2 \frac{x}{2} = \frac{\sec x - 1}{2\sec x}$
